

Strangeloop Networks' AS1000 Appliance Makes iCOMcept's Applications Fast By Default

Strangeloop's AS1000 is a game changing solution for veteran Microsoft IT consultancy firm

VANCOUVER, B.C. June 23, 2009 - Strangeloop Networks™ Inc., a leading provider of solutions that accelerate dynamic web applications developed with Microsoft's ASP.NET framework, announced today that iCOMcept, an IT consultancy firm based in Germany, has selected Strangeloop's AS1000 Application Scaling Appliance to ensure optimal performance and scalability for their internal ASP.NET applications, and those applications of their rapidly growing customer base.

iCOMcept is an innovative IT consultancy firm, focused on integrated IT solutions in security, ecommerce, process optimization, and ERP solutions. In a competitive market with customers like pharmaceutical giant, Bayer International, iCOMcept is committed to delivering tangible, bottom line results, with application performance and scalability as priorities.

"The Strangeloop AS1000 makes our web applications fast by default," said iCOMcept President, Dr. Thomas Voß. "This innovative technology that Strangeloop provides is game changing for organizations seeking an easy solution to their scaling and performance issues."

The Strangeloop AS1000 Application Scaling Appliance, a plug-and-play solution deployed in-line between an enterprise's web servers and the network, accelerates applications developed using Microsoft's ASP.NET and AJAX framework. Minimal changes are required to the infrastructure or to the applications to be accelerated, freeing developers from application-tuning cycles, and allowing them to create and deliver new and valuable features for their company. The AS1000 appliance puts ASP.NET traffic at line speed through a battery of framework-specific acceleration techniques, and intelligently and automatically optimizes data requests in real-time, increasing capacity while reducing bandwidth and server requirements.

"iCOMcept is a proven leader in IT consulting and implementation," said Jonathan Bixby chief executive officer of Strangeloop. "To gain a stamp of approval from such an experienced company is a great testament to our solution and our focus on solving application scaling and performance issues for Microsoft ASP.NET."

About Strangeloop Networks

Strangeloop Networks' products accelerate dynamic web applications with unique, framework-specific solutions that require minimal changes to software coding and hardware infrastructure, enabling developers to focus on providing enterprises with value-added features. With the

Strangeloop AS1000 Application Scaling Appliance for Microsoft ASP.NET and AJAX and the Strangeloop WS1000 Web Services Accelerator, enterprises dramatically shorten code cycles, improve application performance and throughput, more efficiently use bandwidth, achieve greater return on their investment in information technology (IT) staff, network and computing resources, and boost customer satisfaction. Strangeloop is based in Vancouver, B.C. For more information, visit www.strangeloopnetworks.com.
